

Project Summary

Quick Swap Connect – P2P Emergency Money Exchange Platform

Duration: Jan 2026 – Mar 2026

Project Overview

Quick Swap Connect is a peer-to-peer (P2P) emergency money exchange platform designed to help travelers and individuals quickly exchange cash and digital payments when traditional payment methods are unavailable. The platform connects users who need cash with nearby users willing to exchange funds securely, reducing dependence on ATMs and money exchange centers.

Problem Statement

Travelers and individuals often face situations where UPI, cards, or ATMs are inaccessible, leading to cash shortages during emergencies. Existing solutions are slow, location-dependent, or involve high transaction charges. Quick Swap Connect addresses this problem by enabling fast, secure, and location-based peer-to-peer money exchange.

Technologies Used

- React.js
- Node.js
- Express.js
- MongoDB
- Google Maps API
- JWT Authentication
- REST APIs

Key Features

- Location-based matching of nearby users for instant money exchange.
- Secure user authentication and profile verification using JWT.
- Real-time exchange request and acceptance workflow.
- Integrated Google Maps for nearby user discovery.
- Transaction history and request tracking for transparency.
- Responsive and user-friendly interface for both mobile and desktop users.

My Contribution

- Designed and developed the complete MERN stack application.
- Implemented secure authentication and REST APIs.
- Integrated Google Maps API for location-based matching.
- Developed the exchange request workflow and database design.
- Built responsive frontend interfaces and backend services.

Outcome

Quick Swap Connect demonstrates how technology can solve real-world financial accessibility challenges through secure peer-to-peer networking. The project showcases full-stack development, API integration, authentication, database management, and location-based services while emphasizing usability, security, and scalability.

Skills Demonstrated

Full Stack Development • MERN Stack • REST APIs • JWT Authentication • MongoDB • Google Maps API • Problem Solving • Database Design • Software Engineering • Scalable Web Applications
